

Professional Summary

Computer Science undergraduate (expected First-Class Honours) driven by a genuine interest in how complex systems work. I enjoy building tools from scratch, whether that means developing network protocols, writing custom language interpreters, or training machine learning pipelines in Python and Java. My approach to problem-solving is highly adaptable and resilient—traits deeply shaped by my journey as a Ukrainian refugee, for which I received my school's award for overcoming adversity. Having balanced rigorous technical coursework with fast-paced hospitality roles, I am looking for a graduate software engineering or data science position where I can contribute to a team, tackle hard problems, and continue growing as a developer.

Skills

Languages	Python, Java, SQL, JavaScript, HTML/CSS
Libraries	Scikit-Learn, PyTorch, Pandas, NLTK
Tools	Git, GitHub, Docker, DBeaver, VS Code, IntelliJ, REST APIs, ANTLR
Core Concepts	Object-Oriented Programming (OOP), Data Structures & Algorithms, Systems Architecture, Computer Vision, TCP/IP Networking, CPU Scheduling, Relational Databases

Education

Sept 2024 – June 2027	BSc Computer Science (Expected First-Class Honours) , <i>University of Sussex</i> , Brighton, UK Relevant Modules: Data Structures & Algorithms, Software Engineering, Databases, Operating Systems, Computer Networks, Program Analysis, Human-Computer Interaction, Introduction to Computer Security.
Graduated June 2024	A-Levels , <i>Royal Grammar School Worcester</i> , Worcester, UK Subjects: Mathematics, Computer Science, Russian, Further Mathematics (AS).

Technical Projects

Machine Learning Systems (NLP & Computer Vision), *Python, Scikit-Learn*

- Developed a Natural Language Processing (NLP) pipeline to perform sentiment analysis, accurately classifying positive and negative text reviews.
- Built a Computer Vision system capable of performing face alignment by successfully detecting and mapping specific facial landmarks in human images.

Network Protocol Implementations, *Java, TCP/IP*

- Implemented the Trivial File Transfer Protocol (TFTP) from scratch to master low-level UDP data transmission mechanics.
- Engineered a custom, simplified version of TFTP on top of TCP, ensuring full interoperability and compatibility with existing network architecture.

Language Interpreter, *Java, ANTLR*

- Designed and built an interpreter for a simple custom programming language.
- Utilized ANTLR to generate lexers and parsers, successfully bridging the gap between raw source code and executable Java logic.

CPU Scheduling Simulator, *Java, System Architecture*

- Developed a discrete event simulator to evaluate and compare the performance of various CPU scheduling algorithms.
- Conducted rigorous experiments under diverse processor loads to determine algorithmic efficiency, documenting findings in a comprehensive technical report.

Cluedo Game Application, Java, Object-Oriented Design

- Collaborated within an Agile team to build a digital version of the Cluedo board game, applying core Software Engineering principles, OOP patterns, and Git version control.

Experience

April 2024 – **Food Runner / Service Support**, *Catering & Hospitality Support*, Brighton, UK

- June 2026
- Adapted quickly to changing priorities during peak service times, maintaining high standards of organization and customer satisfaction in a fast-paced environment.
 - Developed cross-functional communication, teamwork, time management, and problem-solving skills under pressure.

Awards & Interests

Awards Royal Grammar School Worcester Award for Overcoming Adversity (2024).

Interests Passionate about kitesurfing, basketball, tennis, and golf.
